There are many different kinds of aquariums. Aquariums have turned to be a very popular and fantastic hobby for millions of aquarium and tropical fish enthusiasts worldwide today. There is pretty much one for each level of enthusiast and not all aquariums are for fish. There are aquatic plant aquariums as well and they are very beautiful. There are many different kinds of aquariums. Aquariums have turned to be a very popular and fantastic hobby for millions of aquarium and tropical fish enthusiasts worldwide today. There is pretty much one for each level of enthusiast and not all aquariums are for fish. There are aquatic plant aquariums as well and they are very beautiful.

However if you are considering the purchase of an aquarium for your home, there are several things you need to consider before purchasing your aquarium in order to avoid buying the wrong type, size, or supporting equipment. You will find lots of aquarium tanks to choose from the pet store or specialized aquarium store.

Fish Globes or Bowls is one of the simplest of aquariums form. This type of aquarium is useful for emergency purpose. You can arrange this type of aquarium as part of a table arrangement. In fact it will be good idea to go for big fish bowl and make sure it should be at least a gallon. Except from this you may need a small net and two 1 gallon bottles of drinking water that is not distilled or de-ionized. Don't go for tap water because it is not safe for your fish. The disadvantages of this type of aquarium is as the glasses are cast in one pieces, and if any crack it found it may suddenly expand and cause a flood. However it will be difficult task to repair the old one.

If you will treat water conditioners it still wouldn't be safe. You will also need some floating fish food. You need to cover your bowl with a clean plastic cover because you are not allowing your fish to jump out. Often you should mix about five drops of water conditioner in your aquarium and then replace the cap tightly.

There are also cool water aquariums. These aquariums can be suitable for room temperature and it doesn't require a heater. Cover is essential for this aquarium. Along with the aquarium, you should also get an aquarium stand. You have to bring a five inch fish net, water conditioner and some food to feed your fish. Even you are also required to read all the instructions from your aquarium and water conditioner. Make confirm that your aquarium is running for at least three days before you add any fish. You have to add one fish at a time and you need to wait for at least three weeks to seek the result. There is a maximum of one 1 foot fish per gallon.

The Betta fish vase is one of the other types of aquarium. However this became immensely popular. Betta Fish usually do much better in a large fish bowl than in a vase. The Betta will eat the roots, but only out of desperation and it will not be a healthy fish. The Betta should be fed floating food that is labeled for Betta Fish and freeze dried blood worms, which are actually mosquito larvae. So if you happen to receive one, your fish may be better off if moved to a bowl. Anyhow you need to be sure enough before buying this type of aquarium.

Except all these you need to consider about the framework of the aquarium. Metal Framework is one of the oldest style aquariums that are made up with glass of glass sheets. This is type of aquarium is constructed with piece of angle iron or stainless steel, which are welded together at the corners. Some putty aquarium cement, acrylic or silicon sealants are applied to prevent leakage between the glass and metal. Plastics framework is the ever-expanding applications in the aquarium. Surprisingly these products have been used to replace glass for aquarium. However the plastics have the chance of unbreakable, but can be scratched due to its softness. The Vitorlite framework aquarium is the glass-like material available in different colors. It can give some pleasing effects if you will apply it to the back sides of the aquarium. Due to its opaqueness it will hide the wall and any unsightly wires or other apparatus behind the aquarium. Lastly wooden framework aquariums are considerable primarily for aesthetic reasons. The wooden framework however will have to be constructed from plywood to prevent warping. {mosgoogle left}
